NTC SERIES NTC1

ROL

Sensors For Motorsport

#### **Features**

- Miniature Size
- -30°C to +150°C
- PT1000 or NTC
- Rugged Construction

The NTC1 Series of High Performance Temperature Sensors are designed to measure the temperatures of all types of fluid in demanding motorsport and automotive testing applications.

The sensing element can be either: PT1000 or an NTC  $3K\Omega$  Thermistor; calibration of each is well defined and can be installed into most common ECUs and data logging systems.

Construction choice is either aluminium, brass or stainless steel. With standard motorsports cable and sleeve this will protect from the harsh environments around the vehicle.

The NTC1 Series are race proven in many formulae around the world and offer a reliable and robust solution for professional engineers.
